

COMPETITION MEANS BUSINESS

April 2017

Dear Chairman Pai and the FCC:

Broadband competition brings lower prices and more jobs. I work in the broadband industry, and I am writing to urge you to support policies that encourage more broadband competition not less.

The current Business Data Service (BDS) Order, as proposed, is nothing but a competition killer. It will continue to rig the market for monopoly and duopoly policy that has been proven to fail consumers, chill investment and raise prices.

Competition means business. Customers large and small rely on competitive network providers for better service, innovation and affordability. From start-ups to nationwide retail chains, to schools and libraries, and hospitals and government buildings, customers depend on competition and choice.

The FCC's own data shows that the vast majority of buildings and business locations across America, urban and rural, are still not connected to competition. Now is the time to help connect competition, not kill it.

I encourage the FCC to reject the current BDS Order and support more affordable choices for business customers.

Sincerely,

COMPETITION MEANS BUSINESS

April 2017

Dear Chairman Pai and the FCC:

Broadband competition brings lower prices and more jobs. I work in the broadband industry, and I am writing to urge you to support policies that encourage more broadband competition not less.

The current Business Data Service (BDS) Order, as proposed, is nothing but a competition killer. It will continue to rig the market for monopoly and duopoly policy that has been proven to fail consumers, chill investment and raise prices.

Competition means business. Customers large and small rely on competitive network providers for better service, innovation and affordability. From start-ups to nationwide retail chains, to schools and libraries, and hospitals and government buildings, customers depend on competition and choice.

The FCC's own data shows that the vast majority of buildings and business locations across America, urban and rural, are still not connected to competition. Now is the time to help connect competition, not kill it.

I encourage the FCC to reject the current BDS Order and support more affordable choices for business customers.

Sincerely,

WC Docket No. 16-143

COMPETITION MEANS BUSINESS

April 2017

Dear Chairman Pai and the FCC:

Broadband competition brings lower prices and more jobs. I work in the broadband industry, and I am writing to urge you to support policies that encourage more broadband competition not less.

The current Business Data Service (BDS) Order, as proposed, is nothing but a competition killer. It will continue to rig the market for monopoly and duopoly policy that has been proven to fail consumers, chill investment and raise prices.

Competition means business. Customers large and small rely on competitive network providers for better service, innovation and affordability. From start-ups to nationwide retail chains, to schools and libraries, and hospitals and government buildings, customers depend on competition and choice.

The FCC's own data shows that the vast majority of buildings and business locations across America, urban and rural, are still not connected to competition. Now is the time to help connect competition, not kill it.

I encourage the FCC to reject the current BDS Order and support more affordable choices for business customers.

Sincerely,
